

THE ERASMUS+ PROJECT SustEduFuture+

Co-funded by
the European Union

WHAT IS IT ABOUT?

A project that aims to close the gap between education, sustainability, and digital innovation. It rethinks classroom learning by replacing passive lessons with interactive, gamified, and virtual experiences that help students tackle real-world environmental challenges. It focuses on moving learners from awareness to action through 70 hands-on sustainability challenges and a 24-hour Digital Hackathon where students develop and pitch solutions using data and AI.

You can find all accompanying materials and articles on our website: [link to the website](#)

KICK-OFF MEETING IN ROME

In February, all project partners officially came together in Rome to kick off the project and discuss the next steps. It was a great chance to get to know each other better, understand our different strengths and areas of expertise, and align around our shared mission: empowering teachers to bring sustainability education into the classroom and helping students develop future-ready skills through problem-based and immersive learning.

EMPOWERING THE TEACHERS OF THE FUTURE

The project and its material are aligned with one of Europe's most exciting education frameworks: GreenComp. GreenComp helps teachers and learners make sense of what it actually means to be competent for sustainability. Being competent is not just about knowledge, but about growth and about giving both teachers and students the confidence to tackle global challenges head-on.

What we will do next: co-creation of an e-learning platform

Together, the partners of the project have already started the development of a free e-learning platform for educators across Europe! This platform will help teachers integrate sustainability into their teaching through AI, virtual environments, and gamified learning, with 6+ modules, practical resources, and digital badges to certify new skills.

It will be available in 7 languages and designed for all teachers, all subjects, all levels.

**Want to know when you can use the e-learning platform?
Keep in touch!**
